In this regard, the book seeks to answer several research questions and provide a useful starting point for further research in this field.
Reforming Higher Education in Saudi Arabia - Abdullah Altowjry 2005

This research is about how to extend the educational privileges in Saudi Arabia to those who have been thus far deprived of having an equal educational opportunity. The problem this research is attempting to solve is threefold; first is the problem of how to overcome the issue of overcrowdedness of Saudi universities; secondly, is the problem of how to provide full access to the educational process to distant inhabitants and urban dwellers; and lastly, is the issue of how to encourage non-traditional learners to participate in the higher learning process. The main objective of this paper is to help further develop the educational system in Saudi Arabia by expanding its parameters to take advantage of telecommunications technologies and to incorporate the distance learning method. This paper will show the merits of such a method to the concerned authorities in the Kingdom of Saudi Arabia.
